

The figure displays a scatter plot of 39 data points. The x-axis is labeled with indices from 0 to 39. The y-axis features a central horizontal line, with two additional lines positioned above and below it. The data points are color-coded based on their index: orange (0-4), yellow (5-9), green (10-14), cyan (15-19), blue (20-24), purple (25-29), pink (30-34), and red (35-39). Most points are clustered near the central line, with a few outliers at higher y-values. Specifically, there is a green point at index 13 and a blue point at index 25, both of which are significantly higher than the rest of the data.
